Table 1: Evaluation scope. Counts describe subjects, not successful proofs.

Study	Subjects	Kernels/ops	Relations	Proved	Unresolved
E1	Existing optimized RVV	35	35	TBD	TBD
E2	AVX to RVV/HVX	5	10	TBD	TBD
E3	XNNPACK	TBD	TBD	TBD	TBD
E4	One complete program boundary	N/A	TBD	TBD	TBD

Table 2: Sources and intended measurement setup. Pending fields are not established reproductions.

Item	Configuration or status
Final artifacts	`optimized-rvv-kernels`, `80feb4564`
NEON source and initial RVV	Per-kernel pairing pending
Intended RVV target	Saturn + Shuttle; VLEN 512 bits; datapath 256 bits
Reported upstream platform	FireSim / U250; Apple M1 Pro for ARM comparison
Exact study configuration	RTL, caches, memory model, toolchain and harness revisions pending
Repetition and aggregation	Recover upstream protocol; document any deviations
Optimization time and tokens	External historical records; NR when unavailable

Table 3: Proofs, changes and cost for the 35 final optimized artifacts. All result cells are pending; time includes unsuccessful attempts. $\Delta A/\Delta B$ records source/target changes. Unavailable historical optimization cost is NR.

ID	Published file	Proof	$\Delta A/\Delta B$	Time (h)	Tokens (M)	R_{perf}
